A: Since the sum of interior angles in a triangle is 180° , we subtract the sum of angles A and B:

$$\text{Angle C} = 180^\circ - 50^\circ - 60^\circ = 70^\circ$$

Answer: 70°

Question 2: Determine if Two Triangles are Congruent

Q: Triangle DEF has side lengths 7 cm, 9 cm, and 11 cm. Triangle GHI has side lengths 11 cm, 7 cm, and 9 cm. Are the triangles congruent?

Question What are the key concepts to focus on for the geometry final exam review? Key concepts include properties of triangles, circles, polygons, coordinate geometry, similarity and congruence, and theorems such as Pythagoras' theorem and theorems related to angles and lines. **Answer** How do I find the area of a triangle given its vertices? Use the coordinate geometry formula: $\text{Area} = \frac{|x_1(y_2 - y_3) + x_2(y_3 - y_1) + x_3(y_1 - y_2)|}{2}$, where (x_1, y_1) , (x_2, y_2) , and (x_3, y_3) are the vertices. What is the Pythagorean theorem and how is it used in the exam? The Pythagorean theorem states that in a right triangle, $a^2 + b^2 = c^2$, where c is the hypotenuse. It's used to find missing side lengths or verify right angles. How can I determine if two triangles are similar? Two triangles are similar if their corresponding angles are equal and their sides are in proportion. Common methods include AA (angle-angle), SAS (side-angle-side), and SSS (side-side-side) criteria. What are the properties of a circle that I should remember for the exam? Remember the definitions of radius, diameter, chord, tangent, secant, and the properties of angles formed by tangents and secants. Also, the inscribed angle theorem and the measure of arcs are important. How do I solve for the length of a diagonal in a rectangle or square? Use the Pythagorean theorem: $\text{diagonal} = \sqrt{\text{length}^2 + \text{width}^2}$. For squares, it simplifies to $\text{diagonal} = \text{side} \times \sqrt{2}$. What is the difference between a rhombus and a rectangle? A rhombus has four equal sides and opposite angles equal, with diagonals that bisect each other at right angles. A rectangle has four right angles and opposite sides equal, with diagonals that are equal in length but do not bisect at right angles. How do I find the surface area and volume of 3D shapes like cylinders and cones? Surface area formulas include: Cylinder = $2\pi r(h + r)$, Volume = $\pi r^2 h$; Cone = $\pi r(l + r)$, Volume = $\frac{1}{3}\pi r^2 h$, where r is radius, h is height, and l is slant height. What strategies can help me prepare effectively for the geometry final exam? Review all formulas and theorems, practice problems regularly, understand the concepts behind each problem, take practice

exams under timed conditions, and seek help on topics you find challenging.
